

Maximise your throughput

DeLaval MidiLine™ ML2100
milking system

Your solution – every day

DeLaval MidiLine™ ML2100 is a highly versatile batch milking system where each cluster is shared between two stalls. The system is suitable for a variety of stall configurations; you can choose from Herringbone 30, 50 or parallel - or alternatively adapt a variable solution for your existing parlour.

DeLaval MidiLine ML2100 has been designed with the operator in mind, significantly improving comfort and labour efficiency by making the most of the limited space available in the pit. Its overhead swing-over arm system allows a clear workspace that enables optimum cluster alignment – critical for cow comfort and efficient milk-out.

Whether you need four milking points or as many as 50, DeLaval has the right solution for you.

DeLaval MidiLine ML2100 gives you a number of options to match your budget – from a basic system with pulsation and clusters, designed to suit the size and workflow of your farm, or you can incorporate the latest herd management technology to give you greater control over your cow production and performance.

Because safe and efficient milking is critical to your herd health – and your profitability – we offer a wide range of automation options. Whatever your needs, DeLaval MidiLine ML2100 is built around a modular concept that allows you to easily upgrade your system at any time.

Components mounted “high and dry”

With DeLaval MidiLine ML2100, all the electronics and other components are mounted overhead where there is more room. This not only protects them from humidity and dirt, but also minimises wear and tear and reduces maintenance costs.

KATHLEEN VERNON
TOWN END FARM, STAFFORDSHIRE, UK

High level performance and ergonomics in one

DeLaval MidiLine ML2100 makes the ideal solution when high throughput per milking point is your priority. You'll get the same high milking performance whether you choose the most basic option, or an enhanced version with the easy-to-use, integrated automation that DeLaval is famous for.

Whatever the size of your farm, adding herd management tools can give you the information and control you need to make the right decisions. By integrating DeLaval in-parlour feeding, cow sorting, milk metering and cow performance monitoring, you can streamline your milking and operator efficiency even further.

Capacity and cost savings

Because one milking unit is shared between two stalls, the cluster is never idle. This means that DeLaval MidiLine ML2100 can achieve

a similar parlour capacity to a double-up or low line system - for significantly less capital.

DeLaval MidiLine ML2100 comes pre-assembled in compact modules, saving considerably on installation time and costs, and can be easily installed in both existing and new buildings. The pre-mounted receivers have been designed specifically for the MidiLine™ system, and all the electronics are pre-tested to ensure trouble free operation.

"We were impressed by DeLaval's track record, the excellence of the dealer and the way in which their long experience and expertise was given freely even before we placed the order. An excellent partner for what to us was a pretty daunting project."

KEITH AND TRACEY SPENCE
NGATEA, NEW ZEALAND

Installed a 26-unit DeLaval MidiLine ML2100 with automatic cluster removers and swing arms.

"The clear space in the pit has made it more productive, for both me and the cows. We are now milking 26 sets of cups with one operator."

Your DeLaval dealer

**HOWARD AND HARLEY ASPEN,
CANTEBURY, NEW ZEALAND**

Howard Aspen owns the Southbridge farm 50/50 sharemilking.

"We wanted a one-man operation so we decided on 20 sets of cups with automatic cup removers. It's great, everything went together simply, animal health is excellent and it's very efficient. I'd put in another one tomorrow,"

Professional service programme

As a modern, professional farmer, you need to be sure that your equipment will perform reliably and efficiently. You recognise that breakdowns are very costly, in terms of both downtime and the adverse effect on animal health.

With DeLaval MidiLine 2100 at the heart of your dairy operation you can be sure of peak performance that protects your profitability – and your peace of mind.

In the event of a problem, your DeLaval service technician is

equipped with the latest technology to test and service your MidiLine system. Sophisticated diagnostic systems enable problems to be identified quickly and easily to minimise any interruption to your milking routine.

With DeLaval as your partner, you can feel secure in the knowledge that professional support is always close at hand. Whether you need routine maintenance or you want expert advice on new solutions for your farm, your local DeLaval representative is just a phone call away.
